

SAP® Consulting Solutions

**“FOR IMMEDIATE RELEASE”**

## **CXI Early on to Run SAP® Path for Customers with Mission Critical Needs**

RICHMOND April 1, 2010 -- CXI announced today its inclusion in the Run SAP® certification program offered by SAP® AG. This best-in-class methodology for operations management will further support CXI's comprehensive SAP® services for clients.

“By adopting the Run SAP methodology into our own implementation standards, we are helping ensure high-quality, easy-to-maintain solutions based on the highest industry standards”, said Sujoy Sarkar, CXI's Managing Director of ERP. “Using the Run SAP methodology, we will now be able to operate, maintain and optimize mission-critical SAP® solution-based systems from the early stages of implementation through the post implementation phase, for highly cost effective and optimal end-to-end solution operation. This certification ultimately will empower our customers to manage their SAP® applications more efficiently and at a lower cost.”

The Run SAP® methodology is a phased methodology based on providing best-practice procedures, content, services, training and tools for end-to-end solution operations, along with a standardized and proven implementation method. Our customers will realize the benefits of operating with SAP® approved and certified end-to-end standards. SAP® standards for solution operations are a prerequisite for the continuous improvement of SAP® solution operations. Not only do they enable automation, reducing the cost of operations, but also provide improved traceability through audit trails, helping companies to achieve cost efficiency, quality assurance and compliance enablement.

A long time SAP® partner, CXI has been proactively strengthening its SAP® practice, and the inclusion in the Run SAP® certification program represents a continued commitment to delivering within the SAP® community using the most recent tools and methodologies available. The Run SAP® certification requires CXI Senior Consultants to certify knowledge and skills through tight integration with SAP® Education and SAP® AG who regularly performs audits of the companies certified for Run SAP®.
